This book of abstracts contains the works accepted by the Scientific Committee of the Conference and they will be presented by the participants in the VIII International Congress for the Study of Child Language in San Sebastian-Donostia.

The language used can be Basque, English, French or Spanish. Only the abstracts written in Basque have been translated into English.

Child language is a subject of study for linguists, psychologists and educators and we thought that the three disciplines are necessary to answer the main theme of the conference *One, two or more languages in acquisition: Educational and cross-linguistic perspectives*. The local organising committee is particularly interested in calling the attention of the scientific community of the IASCL and inducing contributions about the situation of child language in the Basque Country.

We think that the study of Basque Child Language as a research subject has specific features that could originate relevant scientific findings.

Welcome and thank you very much!
